Professional Summary

Electronics and Telecommunication Engineering undergraduate with hands-on experience in Python programming, machine learning, web development, UI/UX design, and product strategy. Demonstrated ability to translate real-world problems into technology-driven solutions through collaborative projects. Experienced in data preprocessing, predictive modelling, dashboard design, and business model development. Interested in software development, AI/ML, and innovative technology solutions with a focus on practical impact and scalability.

Education

B.Tech. in Electronics and Telecommunication Engineering *2024 – 2028 Current Year: Third Year*
First-Year CGPA: 8.38 | Second-Year CGPA: 7.78
Bharati Vidyapeeth College of Engineering, Pune

Technical Skills

Programming Languages: C++, Python, JavaScript, VHDL
Web Development: HTML, CSS, FastAPI, REST APIs
Machine Learning and Libraries: Pandas, NumPy, Scikit-learn, TextBlob, Requests
Databases: MySQL Workbench
Developer and Engineering Tools: Git, GitHub, VS Code, Jupyter Notebook, AMD Vivado, NI Multisim, Proteus, Keil
Design Tools: Canva

Projects

CityPulse – Civic Issue Reporting Platform *Business Strategy, Product Development*

- Collaborated with Team Trojans to conceptualize a civic-focused social platform that enables citizens to report urban infrastructure issues, including potholes, traffic congestion, garbage accumulation, and faulty streetlights.
- Contributed to product ideation and strategic planning, emphasizing citizen engagement and streamlined communication between citizens and local authorities.
- Secured **1st Rank among 400+ teams in Round 1** and advanced to the **Top 30 finalist teams** at NEXOTHON 2025.

PlastiSense – AI-Powered Microplastic Detection System *AI, UI/UX Design, Data Visualization*

- Designed the user interface and dashboard concept for a portable AI-powered microplastic detection system, focusing on presenting detection outputs through intuitive visualizations.
- Developed UI/UX concepts to improve accessibility, readability, and interpretation of real-time detection results.
- Collaborated on a technology-driven sustainability solution addressing microplastic pollution through AI-assisted detection and data visualization.

Weather Forecast Model *Python, Pandas, NumPy, Scikit-learn*

- Developed a machine learning model using Linear Regression to predict temperature from historical weather datasets.
- Performed data preprocessing, feature selection, and dataset preparation to improve model readiness and support effective training.

UniShare – Student Resource Hub *HTML, CSS, JavaScript, AI, Web Development*

- Proposed an AI-powered campus resource-sharing platform connecting students to facilitate equipment reuse, academic resource exchange, and collaboration.
- Conceptualized platform features for resource discovery, student interaction, and efficient sharing of educational materials and equipment.

Certifications

Java Training (65%) | Python 3.4.3 Training (80%) | HTML Training (82.50%) – Spoken Tutorial, IIT Bombay
